

NUHEARA

Hearing Intelligence

PRODUCT OVERVIEW

SINC™

SINC™ controls the balance between world noise and speech

Choose world on / world off or a blend of both to hear a perfect amount ambient sound. SINC™ allows you to further augment your world by focusing on your conversations while blending out background noise.

EarID™

Ear ID™ is an artificial intelligence engine that learns how you hear and adjusts the IQbuds sound to suit. It makes the listening experience completely personalized

- 1 Every ear is different and everyone hears differently. Ear ID™ creates a unique hearing profile for you by evaluating how you hear the world and then calibrating your IQbuds™ for a personalized listening experience
- 2 Nuheara uses the National Acoustic Labs NL2 (NAL-NL2) formula to adjust the sonic spectrum of the IQbuds, which is an internationally recognised and endorsed method of tuning hearing devices for those with specific needs

NL2

Nuheara IQ

Hearing Intelligence

Our software platform has a world class UI and provides complete control over the powerful DSP algorithms built into the IQbuds

- **SINC™ Control**
- **Ear ID™ Personalization***
